Jeffrey Kraegel is a Project Manager with the Health Care and Community Safety Program at the Canadian Standards Association. In his 15 years at CSA he has managed technical committees and developed standards in a wide range of areas, including blood management, medical gas systems, and medical device reprocessing.

Jeffrey currently manages the CSA standards for health care facility engineering and physical plant, including those for plumbing, HVAC, and infection control during construction, renovation, and maintenance of health care facilities. Over the past two years he has worked with the CSA technical committee to complete the new standard for design and construction of Canadian health care facilities, Z8000.
